All TP.. Not Mounted

Measurement type select (IV or CV)

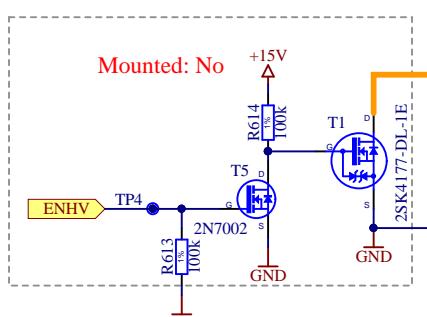

Mounted:

measurement terminal

Optional resistor if bias resistors are not populated in each channel

Maximum leakage current ($V_{GS}=0V$, $V_{DS}=1kV$) : 100uA
We may have to remove it if it spoils measurement.

Leakage estimation(@room temperature): 80pA
1) swMatrix: 70pA

- 1) swMatrix: 70pA
- 2) Drain of MAX328: 10pA

As all terminals of all switches are always very close to ground level, the leakage current should be fairly constant and therefore it should be possible to calibrate for it.

Capacitance estimation: 50pF

1) swMatrix: 40pF

As all terminals of all switches are always very close to ground level, the capacitances of the switches should be fairly constant and therefore it should be possible to calibrate for it.

8 x SPST switch. The switches can be controlled independently. Can be used to short (10 Ohm) each channel to ground (HVRFT).

This feature is especially useful when leakage currents are not uniform between neighbor channels, having all channels shorted to the same potential prevents parasitic current flow between channels.

Leakage estimation(@room temperature): 50pA

- max 150pA (table 1, page 3, ADG1414 datasheet)
 - typical 50pA for 10/-10V input voltages (table 1, page 3, ADG1414 datasheet)
 - based on curves for similar switches, the leakage for input voltages close to 0V should be less than that

2) Drain of MAX328 with one channel selected

 - max 10pA (page 2, MAX328 datasheet)
 - typ 3pA (page 2, MAX328 datasheet)

Capacitance estimation: 20pF

- Capacitance estimation: 20pF

 - 1) Source of ADG1414, $8\text{pF}@1\text{MHz}$ typical (table 1, page 3, ADG1414 datasheet)
 - 2) Channel of MAX328: not specified explicitly, but one may estimate it to be around $10\text{pF}@1\text{MHz}$

8 x SPST switch. The switches can be controlled independently.
Can be used to short (10 Ohm) each channel to ground (HVRET).

This feature is especially useful when leakage currents are not uniform
between neighbor channels, having all channels shorted to the same potential
prevents parasitic current flow between channels.

Leakage estimation(@room temperature): 50pA

- 1) Source Off leakage of ADG1414:
- max 150pA (table 1, page 3, ADG1414 datasheet)
 - typical 50pA for 10/-10V input voltages (table 1, page 3, ADG1414 datasheet)
 - based on curves for similar switches, the leakage for input voltages close to 0V should be less than that
- 2) Drain of MAX328 with one channel selected
- max 10pA (page 2, MAX328 datasheet)
- typ 3pA (page 2, MAX328 datasheet)

Capacitance estimation: 20pF

- 1) Source of ADG1414, 8pF@1MHz typical (table 1, page 3, ADG1414 datasheet)
- 2) Channel of MAX328: not specified explicitly, but one may estimate it to be around 10pF@1MHz

prevents parasitic current flow between channels.

Leakage estimation(@room temperature): 50pA

1) Source Off leakage of ADG1414:

- max 150pA (table 1, page 3, ADG1414 datasheet)

- typical 50pA for 10/-10V input voltages (table 1, page 3, ADG1414 datasheet)

- based on curves for similar switches, the leakage for input voltages close to 0V should be less than that

2) Drain of MAX328 with one channel selected

- max 10pA (page 2, MAX328 datasheet)

- typ 3pA (page 2, MAX328 datasheet)

Capacitance estimation: 20pF

1) Source of ADG1414, 8pF@1MHz typical (table 1, page 3, ADG1414 datasheet)

2) Channel of MAX328: not specified explicitly, but one may estimate it to be around 10pF@1MHz

This feature is especially useful when leakage currents are not uniform between neighbor channels, having all channels shorted to the same potential prevents parasitic current flow between channels.

Leakage estimation(@room temperature): 50pA

- 1) Source Off leakage of ADG1414:
 - max 150pA (table 1, page 3, ADG1414 datasheet)
 - typical 50pA for 10/-10V input voltages (table 1, page 3, ADG1414 datasheet)
 - based on curves for similar switches, the leakage for input voltages close to 0V should be less than that
- 2) Drain of MAX328 with one channel selected
 - max 10pA (page 2, MAX328 datasheet)
 - typ 3pA (page 2, MAX328 datasheet)

Capacitance estimation: 20pF

- 1) Source of ADG1414, 8pF@1MHz typical (table 1, page 3, ADG1414 datasheet)
- 2) Channel of MAX328: not specified explicitly, but one may estimate it to be around 10pF@1MHz

Leakage estimation(@room temperature): 50pA

1) Source Off leakage of ADG1414:

- max 150pA (table 1, page 3, ADG1414 datasheet)

- typical 50pA for 10/-10V input voltages (table 1, page 3, ADG1414 datasheet)

- based on curves for similar switches, the leakage for input voltages close to 0V should be less than that

2) Drain of MAX328 with one channel selected

- max 10pA (page 2, MAX328 datasheet)

- typ 3pA (page 2, MAX328 datasheet)

Capacitance estimation: 20pF

1) Source of ADG1414, 8pF@1MHz typical (table 1, page 3, ADG1414 datasheet)

2) Channel of MAX328: not specified explicitly, but one may estimate it to be around 10pF@1MHz

8 x SPST switch. The switches can be controlled independently.
Can be used to short (10 Ohm) each channel to ground (HVRET).

This feature is especially useful when leakage currents are not uniform
between neighbor channels, having all channels shorted to the same potential
prevents parasitic current flow between channels.

Leakage estimation(@room temperature): 50pA

1) Source Off leakage of ADG1414:

8 x SPST switch. The switches can be controlled independently.
Can be used to short (10 Ohm) each channel to ground (HVRET).

This feature is especially useful when leakage currents are not uniform between neighbor channels, having all channels shorted to the same potential prevents parasitic current flow between channels.

Leakage estimation(@room temperature): 50pA

- 1) Source Off leakage of ADG1414:
 - max 150pA (table 1, page 3, ADG1414 datasheet)
 - typical 50pA for 10/-10V input voltages (table 1, page 3, ADG1414 datasheet)
 - based on curves for similar switches, the leakage for input voltages close to 0V should be less than that
- 2) Drain of MAX328 with one channel selected
 - max 10pA (page 2, MAX328 datasheet)
 - typ 3pA (page 2, MAX328 datasheet)

Capacitance estimation: 20pF

- 1) Source of ADG1414, 8pF@1MHz typical (table 1, page 3, ADG1414 datasheet)
- 2) Channel of MAX328: not specified explicitly, but one may estimate it to be around 10pF@1MHz

A HGC sensor probecard

- 1) Channels: 136 (+ 8 calibration channels)
- 2) Leakage current : < 100pA
- 3) Parasitic capacitance : 50pF
- 4) Connectivity:
 - HV (2xtriax)
 - precise current meter (2xtriax)
 - LCR meter (4xBNC)
 - PC control (isolated USB)
- 5) User interface:
 - USB control for automatic measurements
 - status LEDs (HV on/off, measurement type, general status, USB communication) and 7 segment display (active channel)
 - micro-switches for next/previous channel (manual lab testing and debugging)
- 6) Current to voltage converter
- 7) On board 12 bit ADC (10 bit effective resolution)
can be used for fast PASS/FAIL characterization when great precision is not required

This is only high level sketch of system architecture. For the detailed implementation please check following pages.
